MODULO 3

ServicioWeb: My 100 Movie List

Presentado Por: Juan Carlos Reyes

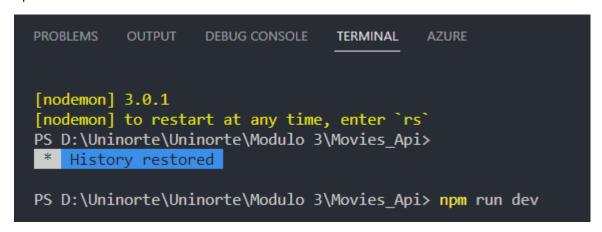

1. Ruta Entrega Módulo 3

https://github.com/JuanCarlosReyesGuerrero/Uninorte/tree/main/Modulo%203

2. Correr el proyecto

npm run dev

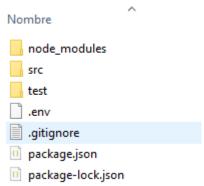

```
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node src/index.js`
[Function: verifyToken]
servidor corriendo en: 9000
Base de datos conectada
```

3. Version instalada de NodeJs

```
C:\Users\quind>node --version
v16.18.0
C:\Users\quind>
```

4. Configuración del Proyecto

```
∨ MOVIES_API

    package.json > {} dependencies
 > node_modules
                                              "name": "movies_api",

✓ key src

                                              "version": "1.0.0",
  > iii models
  > ir routes
    Js index.js

✓ 

  itest

   ## .env
                                                "dev": "nodemon src/index.js"
   .gitignore
   package-lock.json
   package.json
                                               "license": "ISC",
                                                "express": "^4.18.2",
                                                "jsonwebtoken": "^9.0.2",
                                                "mongoose": "^7.5.0",
                                                "swagger-jsdoc": "^6.2.8",
                                                "swagger-ui-express": "^5.0.0"
```

5. Funciones controladoreas del Proyecto

```
// import routes
const authRoutes = require('./routes/auth');
const movieRoutes = require('./routes/movie');
const movieByUserRoutes = require('./routes/movie-by-user');
const verifyToken = require('./routes/validate-token');
app.use("/api-doc", swaggerUI.serve, swaggerUI.setup(swaggerJsDoc(swaggerSpec)))
```

6. Middlewares del Proyecto

```
// route middlewares
app.use('/api/user', authRoutes);
app.use('/api/movie', verifyToken, movieRoutes);
app.use('/api/movie-by-user', verifyToken, movieByUserRoutes);
```

7. Autenticación y autorización del Proyecto

```
const jwt = require('jsonwebtoken')

// middleware para validar token (rutas protegidas)

const verifyToken = (req, res, next) => {

    const token = req.header('auth-token')
    if (!token) return res.status(401).json({ error: 'Acceso denegado' })

    try {

        const verified = jwt.verify(token, process.env.TOKEN_SECRET)
        req.user = verified
        next()
    } catch (error) {

        res.status(400).json({error: 'token no es válido'})
    }
}

module.exports = verifyToken;
```

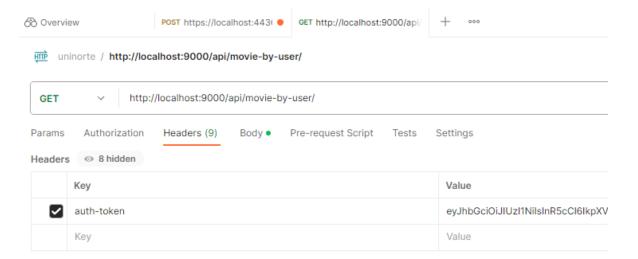

8. Conexión a la base de datos

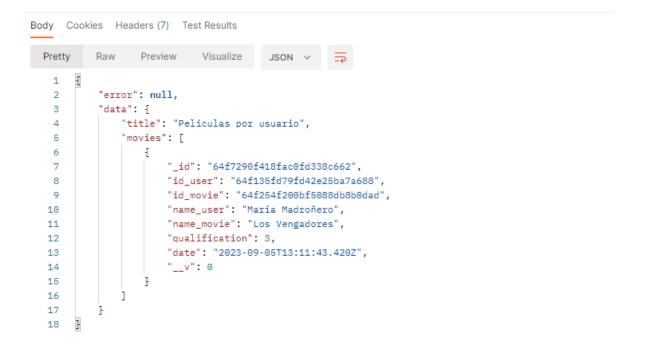

La base de datos se encuentra en un repositorio de MongoDB Atlas en la Nube

9. Herramienta para pruebas de funcionamiento de APIs

Se utilizó el software Postman

10. La documentación de las apis se realizó con Swagger
